May 28, 2020

Dear Recruiter,

My name is Keshav Bansal, and I have just finished my third year at IIT Kanpur in the Computer Science department. I am very enthusiastic about working at Jumio Corporation, given its reputation as one of the leading companies using Machine learning methods in mobile payments and identity verification.

I have a CPI of 10.0/10.0 till my 5th semester. I have also been awarded 10 A* grades (for exceptional performance in courses). I am a machine learning enthusiast and have done courses like Intro to ML and Special topics in NLP. I am also a part of the Probabilistic ML reading group conducted by a professor at my college. I am currently working as a software development intern at Microsoft, India. Before this, I have worked as a data science intern at Praktice.ai, Bangalore (a startup offering AI solutions to the medical community). I recently took part in the Semeval 2020 shared task of sentiment analysis in social media text. My team was ranked 5th among 62 teams which took part in the competition. My paper for the same is under review right now.

I am well versed in writing code in TensorFlow and PyTorch and also have a deep understanding of the maths behind ML. I have also worked in the area of computer vision during the ML courses in my college. I was awarded the JN Kapur scholarship for being the best 2nd year undergraduate in maths courses. I will be glad if you could have a look at my resume.

Sincerely,

Keshav Bansal
